In response to applicant's filing dated March 28, 2001, the following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Marino (5768034).

The reference shows an optical disk pickup apparatus wherein a lens holder 16 having focusing and magnetic tracking coils 32, 34, 38 and 40 and a tilt compensating circuit within the tracking direction in order to compensate the tilting based on a focusing current as shown in fig 1 element 30 and cited in column 3 lines 24-42.

With respect to the limitations of claims 2-5 and 7, the reference discloses the use of tilting the lens toward the peripheral side of a disk as shown by element 30 rotation and the simultaneously focusing and tilting operation as cited in column 3 lines 39-42.

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the cited prior art shows the use of minus tilting angle in a focusing up and a plus focusing angle in a focusing down operation.
